

Vogtareuth, 31 May 2019

Dear Dr. Hamm

It gives me immense happiness to have an opportunity to participate in an EEG Training here in Schön Klinik, Vogtareuth, Germany, which is a widely renowned clinic for orthopaedics, neuropädiatrics, neurology and internal medicine.

During the training period, I learnt a lot of theoretical and practical knowledge on different subjects, mostly on EEG derivations that has led to enhance my own skills and learnings. It has been very fruitful and has boosted my confidence to provide a better quality and efficiency in my service. To list some of the benefits I received, I would briefly jot down some points hereunder.

- Opportunity to learn about different EEG derivations of adult and paediatric in both ambulatory and admitted patients.
- Knowledge on the measurements of points for the position of electrodes.
- Knowledge of advanced techniques and extra-added electrodes for better diagnosis if required.
- Understanding ideas and skills to handle difficult paediatric patients.
- Knowledge and skills for the use of gold and other electrodes as well.
- A great opportunity to observe various therapies (such as Logo, Ergo, Music and Physiotherapy) and an intensive high standard working area and environment.
- Access to good learning environment to widen technical expertise.

I would really want to express my sincere gratitude to the hospital management, departments, supportive staffs, doctors, technicians and patients personally and on behalf of my hospital (Tribhuwan University Teaching Hospital, Maharajgunj, Kathmandu, Nepal).

Thank you everyone. Love from Nepal to all!

Sincerely, 
Ganga Devi Prajapati
Staff Nurse / EEG Technician
